THERE IS A REASON IT'S DEVELOPERS ONLY

Vidit Bhargava

Yesterday I was reading a blog post on the internet, it was talking about how early Mountain Lion users were facing issues and how the same would not have been in Steve Jobs' era. Hardly anything different from what Apple critics would say, but it left me to ponder on something. Why do people download Developer Previews when they aren't developers?

Of course there is a reason why developer only previews are released, they are meant for developers who want to make their apps compatible to new standards, evaluate or suggest changes which will eventually help their firms make their product better and provide 'users' the best experience.

Quite certainly developer previews have some glitches, errors and aren't fit for consumers at all. There isn't any problem with that. Obviously that's why they are developer only, so that developers can help software companies iron out any kinks in the software, to make them bug free and more secure before the final product comes out.

The problem arises when every kid with a tech blog and access to torrents downloads these previews and berets the software for having glitches, which puts forward a negative image of the software. Why peep into the kitchen while the food is being made?

Part of this Problem is the extensive media

coverage a developer preview gets.

Just minutes after the arrival of a new operating system's Developer preview, the world of tech news is filled with In-Depth Previews of the developer preview. That is bound to make users excited to download the preview and try it themselves.

Using a developer preview can be disastrous for the end-user. Me being a developer myself downloaded a developer preview of Windows 8 a few months back to help myself with web-app Development, while the preview helped me test my HTML5 apps on the New operating system, it also posed problems beyond my reach! For example the frequent blue-screen of death while shutting down was a major issue and I was hardly able to debug it from my end. Eventually I had to give up the idea of using a developer preview and use my good old Windows 7 instead. The same happened while using early builds of the iOS5, though the problems were more controlled then and there weren't many crashes and it was a more productive outing, which helped my app Development team to be on track with the latest operating system and the latest frameworks, but A few really irritating software issues were imminent even in the later stages of the Beta Program.

Summing it up I'd like to say, Developer previews are not for download unless you are actually a developer and not some tech-blogging teen geek.

ALL ABOUT THE 'NEW iPad'

Vidit Bhargava
Apple finally unveiled
the third generation
iPad on March 7th 2012.

Just about an year after it had announced the iPad 2. I'd like to start with the iPad 2 today. To make it clear iPad2 was a major design upgrade. The new Aluminum back was just about how much Apple could change the iPad's look in one update. And hence, contrary to what others might say, iPad 2 was the design overhaul update and not a stability update. So let's paste Apple's upgrade trends for iOS devices now. The first update usually brings a design overhaul while the second update becomes a stability update for the first one without any significant change in design. Therefore, The Third Generation iPad had to be a similar looking, more stable version of

the iPad 2.
It's just that. And
goes a little further.

Let me walk through the 'new'
iPad's key-features one by one
now:

Retina Display: The iPhone 4 was the first device to get a retina display and so everyone had hoped that it will come to the iPad 2 also. Turns out a Retina Display on the iPad 2 was not only expensive it also had technical difficulties to overcome, and so it came an year later to the iPad screen.

You've got to experience a retina display in person to know how it feels, it's not the same thing as using one on an iPhone, it's even better and brighter. Infact the 2048x1536 pixels resolution is even better than what

an HD resolution would like on a tablet. The iPad with its Retina Display and IPS LCD has the best screen any mobile device (phone or Tablet) has ever had. And takes the 3rd Generation iPad miles ahead of competition in terms of graphics and display quality. Instantly all other tablets in the world, now look dull and of ancient ages. To top it all the new iPad maintains the same battery life of 10 hours which makes it all though more difficult for competitors to catch up with the father of all tablets.

5MP Camera: The back-camera which is now called an iSight Camera has got a major tech-bump in terms of image quality, the new iSight Camera, believe it or not, takes better pictures than the iPhone 4 camera. Even though both of them are 5MP. Yes, the key to great photography is not in the megapixels but the technology involved in the camera, and Apple's idea of adding another lens and widening the camera aperture is a good one. And adds real color to the images.

There are obviously high-expectations from the camera, given that the same technology did wonders for the iPhone 4S. The initial shots look great, but I won't comment on the quality before I actually lay hands on one.

A5X: it's not A6 or last year's A5. It's the A5X processor. The A5X processor has a dual-core and quad-core graphics. Quad-Core Graphics engine now help the iPad to get better games with console-like graphics, Apple had demoed A NAMCO developed Action Game and the Infinity Blade Dungeons by Epic Games. Both of them had looked spectacular and the iPad like an equal amongst its console rivals.

So, while A5X might not bring a steep performance update in CPU, but graphics have definitely become top-notch. Hence the name A5X and not A6.

But a word about the technical specifications over here, Apple controls its own hardware and software and hence your new iPad is not likely to be a slow experience in any way. You are definitely going to get a blazing fast experience and by upgrading the hardware apple allows the developers to build better apps which provide a great experience to the customer.

While we can compare Android Tablets by the processor speed, RAM or any other technical specification, we cannot do the same when comparing an Android Tablet to the iPad. So, when we compare an Android Tablet to the iPad we will also have to compare the user experience of using the same apps on both the devices, moreover an overall experience is to be compared rather than a fragment of it.

4G LTE: While Indian users might not get the 4G speeds on the third Generation iPad when it launches, users in the US have a lot to be happy about, The new iPad is a 4G LTE device which comes with AT&T, Bell, Rogers and Verizon as supported 4G suppliers. Moreover 4G LTE means that the new iPad will allow for faster web-browsing and web-experience. So this is 4G, of know use in the Indian Market but of immense power in areas it is present.

Voice Dictation: Unlike the iPhone the iPad doesn't come with Siri built in. The new iPad however has Voice Dictation. Voice dictation is a part of Siri, which takes voice input and converts it to text. We can expect Siri once it's out of the beta stage, though.

The Voice Dictation, like Siri works only when your iPad is connected to the internet.

Pricing and Availability:

16th March 2012	23rd March 2012*
United States	Belgium
Canada	Greece
United Kingdom	Ireland
France	Italy
Germany	Macau
Switzerland	Mexico
Japan	New Zealand
Hong Kong	Portugal
Singapore	Spain
Australia	Sweden

* The 3rd Generation iPad will release In 26 European countries on 23rd March 2012. Only Some of them have been listed above.

	16GB	32GB	64GB
iPad WiFi	\$499	\$599	\$699
iPad WiFi + 4G	\$629	\$729	\$829
iPad 2 WiFi	\$399	-	-
iPad2 WiFi+ 3G	\$529	-	-

Summing Up:

In a time where the only significant tablet in the market is the iPad, And others are only catching up, even a minor update to the tablet would mean even more to catch up for the competition. The new iPad builds on the image of the previous two versions. And with more and more tablet buyers emerging everyday, the new iPad will gain on that front too.

A major selling point of the iPad will be the Retina Display, with the Retina Display the new iPad opens up an array of improvements that graphic based content could get. And along with the new quad-core graphics, everything on the new iPad will look brighter and wonderful, specially movies and nextgen games.

Should you Upgrade? Those who had bought the first generation iPad can upgrade now. The iPad has come a long way after its 2010 release, and with the new iPad being more of a stability upgrade, upgrading from the first generation iPad will definitely turn out to be a great idea.

For Those who had bought the iPad 2, an upgrade is not recommended. The iPad 2 is nearly as good as the new iPad but sans Retina Display.

For those wanting to buy a new iPad, it is a golden period to buy one.

COVER STORY

CONTENT CREATION ON AN iPad

Vidit Bhargava

It is often said that the iPad is a content consumption device and not a content creator. However, this is just one of the many myths surrounding an iPad. The following is a list of some of the best content creation iPad apps available on the App Store.

PHOTOGRAPHY AND DIGITAL IMAGING

At \$9.99 Adobe Photoshop Touch, puts the power of Photoshop into your iPad. Its the complete digital imaging solution for your iPad.

Photoshop Touch
by Adobe Systems

Size: 50.2 MB
Works with: iPad 2
and later.

Price: \$9.99

Sketchbook Pro is an artist's paradise. The app gives a blank canvas and a set of brushes to use one it. You can create and modify almost anything. Even our eZine used the app to create one of the cover-pages!

Sketchbook Pro is available for \$4.99

Sketchbook Pro
by Autodesk

Size: 15.5 MB

Price: \$4.99
Express: Free

iPhoto is an Image Effects and Editing powerhouse. With professional quality effects, image editing tools like saturation, exposure and light settings and image finishing tools too. iPhoto is a great a buy.

iPhoto also packs in a Photo Journals tool. Photo journals allow you to share your images in a new way.

Another one from Autodesk, Pixlr-o-matic is a rage. The app is one of the best tools to modify or recreate your images. With one of the best set of image effects, pixlr-o-matic is easily the coolest image editing application on an iPad.

Pixlr-o-matic comes with quite a few effects built-in, but you can download a 'plus' pack for \$2.99 to get more such effects.

iPhoto
by Apple Inc.

Size: 106 MB
Works with: iPad 2 or
Later

Price: \$4.99

Pixlr-O-Matic
by Autodesk

Size: 13 MB

Price: Free
Extra Effects: \$2.99

OFFICE SUITES. WRITING CONTENT.

iWORK

iWork is one of the most advanced office-suites available in the computer-verse. Coming to the iPad. iWork is a much more touch-friendly experience. With the same tools available on the Mac. The iWork package on the App Store is available not as a single app but a collection of 3 apps \$9.99 each. All iWork Apps store your documents on the iCloud.

Keynote: Keynote is the presentations' app. You can create good looking presentations and export them in any format you like (including PDF, and PPT). Keynote applications can be run on all macs, and exported to PPT formats for use on PCs.

	<p>Keynote by Apple Inc.</p> <p>Size: 327 MB</p> <p>Price: \$9.99</p>

Numbers: Numbers is the spreadsheet tool in iWork. Apart from a Simple Table Layout which is quite synonymous with Spreadsheets, Numbers also has a good range of themes, including Invoices, Travel Planners, Budget, Auto Logs and more.

Like Pages and Keynote, Numbers also syncs with documents on the cloud and numbers' spreadsheets can be shared in PDF, XLS, and .numbers format.

Numbers
by Apple Inc.

Size: 283 MB

Price: \$9.99

QUICK-OFFICE

The best way to understand smart playlists is to see how they work. To edit a smart playlist, you can select it in the sidebar Smart Playlist, or you can Option-click on it.

Let's look at the Recently Played playlist.

Figure 31: This is a simple smart playlist, but you can make much more complex playlists in this dialog.

This playlist contains the following rules:

Match **all** of the following rules:
 [Last Played] [is in the last] 2 [weeks]
 [Media Kind] [is not] [Podcast]

As you can see in Figure 31 (above), this playlist looks for songs that were Last Played in the last 2 weeks. The "Live updating" checkbox is selected, meaning that the playlist updates as you listen to songs. When a song is played, its Last Played date and time are updated,

QuickOffice Pro HD for iPad, is another office Suite which comes with Word, Powerpoint, and Spreadsheets built-in. Quick-office is similar to the iWork application in many ways but has a lot more sharing options, including sugar-sync, dropbox and Google Docs. Its a neat deal at \$19.99 but What lacks here is, designing options.

Quickoffice Pro HD
by Quickoffice, Inc.

Size: 24.1 MB

Price: \$19.99

APP STORE

APP OVERSIZE

Vidit Bhargava

The new iPad launched this week was updated with a Retina Display, the resolution of the iPad was doubled from 1024x768 to 2048x1536. With the updated resolution the app sizes have also increased. Many Apps have more than doubled in size and graphic intense apps are taking a heavy toll on the iPad space. This is not only posing a great problem to 16GB iPad users but also to iPod Touch users who are now facing a space crunch since universal apps have increased in

size. The problem isn't very big right now, since most of the apps haven't updated yet but in the near future Apple will have to rethink their universal and retina app system.

GRAPHIC HEAVY APP SIZES HAVE INCREASED STEAPLY.

Universal Apps: Currently universal apps contain the data for both iPhone and iPad versions. Hence, They are bound to be larger than the apps that run on only one device. The problem is that the iPhone users have to download a lot of trash data (the data used only on iPads) and hence are loosing on valuable disk space, this problem does not arise any storage threat currently since the iPad apps don't have a very large size. However apps will soon upgrade themselves to the Retina Display standards. And iPhone users will end up downloading more than necessary trash.

Solution: Apps should intelligently recognize the device on which they are being down-

loaded, so if a universal app is being downloaded on an iPhone it should download the data only needed for the iPhone app to run and not the iPad. However a complete copy of the universal app should be stored in iCloud, and get downloaded to the computer when connected to one. This way iOS apps won't suffer from Fragmentation. Nor will they end using valuable space.

Apps for the iPad: iPad only apps face a similar issue but on a smaller scale. The iPad

apps may increase a little in size with the arrival of retina display. This puts a little trouble for 16GB users. Since app sizes have increased considerably, 16GB iPad users will end up hav-

ing to delete some of the apps.

Solution: The Next Generation iPad should increase disk space and make 32GB as the lowest available disk space. (Currently that position is held by 16GB iPads). So the new product range could have 32GB, 64GB and 128GB iPads, given the quadrupling app size.

Summary: The new iPad has put Apple into an uncanny problem and has put the App Store at a fork from where it can become fragmented and extremely messy or it can become smarter and more advanced putting itself ahead of competition. Apple has to think of a app store update now, and they need to do it fast.

FLYTE OR CRASH?

THE MUSIC REVOLUTION HAS STARTED
LAUNCHING INDIA'S LARGEST MUSIC DOWNLOAD STORE.

EXPERIENCE IT NOW

LARGEST COLLECTION ▪ CD QUALITY MUSIC ▪ DRM FREE ▪ SYNC ON MULTIPLE DEVICES

flyte
The Digital Store

Vidit Bhargava
 Flipkart launched its digital store Flyte some time back, Flytelaunc brings online music downloads o flipkart. Flyte offers solo songs starting Rs.6 with Albums are priced likewise. However, buying an album is a little cheaper than buying all of its songs one by one. Flyte offers a large database of songs which they had bought when they had acquired 'Chak-pak'.

Songs at the Flyte store start at Rs. 6, but the price goes up steeply if you are downloading

songs from a popular album. So while 'Sad-da Haq' from Rockstar may cost you 9 bucks, 'Aahatein' is priced slightly higher at Rs. 15. Such discrepancies exist within one album also, for example, all of Delhi 6's music is available for Rs.9 each, 'Masakalli' however is placed at Rs.15.

There is a big difference in the price of albums in CD and in MP3 from the same store (flipkart), The following is a table comparing prices of these albums with their CD counter parts

Album	Flyte	Audio CD
Rockstar	Rs. 113	Rs. 149
Ek Main Aur Ekk Tu	Rs. 94	Rs. 148
Kahani	Rs. 54	Rs. 136
Break Ke Baad	Rs. 64	Rs. 145

The above table gives us a clear idea about how well priced the music collection at Flyte is.

Not only does this aggressive pricing attract Audio CD buyers, it also attracts those who generally buy pirated music from the local stores which charge them just about the same as Flyte, so they won't be losing their morals and still get the music at the same price or even cheaper than that. The next set of potential customers, will be the people who used to use the popular website "Songs.pk" for downloading music but are now left with no other option but to buy music, since the website has now been banned. Flipkart will also start doing ads about this new service and that will attract even more users.

Flipkart currently allows the users to download music at a bit rate of either 320Kbps, 128Kbps or 64Kbps (at the same price) and Songs can be downloaded a maximum of 4 times after they are bought and all the songs are DRM Free, which means that they'll work with every device.

Apart from the Flyte announcement Flipkart also introduced Flipkart Wallet. Wallet is a pre-paid payment 'instrument'. So, Once you are logged into flipkart you can 'add money to your flipkart wallet' and then start shopping so you don't need to worry about paying money every time you order something! This makes it easier to download music instantly and also works with other purchases.

An interesting thing to note over here is that Flyte is the name of the digital store and not the MP3 download section, which could mean that sooner or later flipkart is going to enter into the eBook business also. Let's hope that too is DRM Free.

So this is what Flipkart's Flyte is. Whether the service is going to be as successful as its on-line bookstore cannot be said at the moment, but it sure will convert many people into actually buying digital content.

MP3 Downloads

A SONG, FOR A SONG.

SONGS STARTING AT Rs.6/- ONLY.

LARGEST COLLECTION ■ CD QUALITY MUSIC ■ DRM FREE ■ SYNC ON MULTIPLE DEVICES

flyte

The banner features a blue and green background with diagonal lines. On the right, there is a logo for 'flyte' consisting of a stylized wave icon above the word 'flyte' in a lowercase, sans-serif font.

OS X MOUNTAIN LION

Vidit Bhargava

Recently Apple announced the next version of their OS X lineup, its called Mountain Lion. Unlike Lion which only made a few minor upgrades, Mountain Lion is a major software update to the OS X Series. The last big update we saw was 5 years ago, when Apple introduced a Radical new UI with OS X Leopard. Mountain Lion, though with a similar UI has got a lot of other improvements which are sure to change the way Macs will be used in the future. Here's a quick-look at some of them.

Messages: The iMessage service which is used for iPhone-iPod-iPad interaction will soon come to Macs. Making an iPhone-iPod-iPad&Mac interaction easy. iMessage is a messaging service which can be used between iOS users for free. So you can have long conversations with your friends for free if they happen to have an iOS device near them. With Messages the same can now be done using a Mac.

Messages Beta is available for download to OS X Lion Users.

Notification Centre: Previously Macs were dependent on Growl's open-source Notifications system. With OS X Mountain Lion Apple has done away with Growl and come up with an iOS style Notification Centre which keeps a track of all your notifications and with a single three-finger swipe towards right, you can keep a track of all notifications.

Reminders: The New OS X is all about the iOS-ification of the Mac. And another native iOS app makes its way to the OSX. Reminders, an iCloud based app is an advanced to-do list app which includes location specific reminders which work on the concept of a geo-fence and the basic list type reminders. Reminders, launched with iOS5 was a wonderful app for iOS, the same coming to the Mac only makes it more productive.

All the Reminders are iCloud synced, so for example you create a to-do list on your Mac, you can check the same list on your iPhone, iPad or iPod Touch also.

Notes: One of the most basic text-editing tools on iOS is the Notes application. Helpful for quick-drafts, short-hand writing, and all other stuff that a Notes book would do. With OS X Mountain Lion, you can now create notes on your Mac too and they automatically sync via iCloud to be pushed to your other iOS Devices.

Notes can even be pinned to the desktop, and serve as quick reminders once you boot-up your Mac.

Game Center: Game Center is a good gaming network for iOS Gamers, with leader-boards, Achievements, Challenges and more. With the Same Coming to a Mac, Game Center would now mean having long gaming sessions with friends using iOS or Mac alike, widening the scope of a large social gaming network which Game Center would like to be.

Messages

Safari Improvements: With a Unified Search bar and a better sharing options Safari on the OS X Mountain Lion looks and feels cleaner and much more up-to-date keeping it a notch closer to competition.

Twitter Integration: Just Like the iOS5 Twitter is deeply integrated to OS X Mountain Lion, keeping all the Twitter users happy, since sharing Weblinks, Video Clips, Pictures just got easier!

So that is Mountain Lion. Apple is clearly trying to recreate the iOS experience to Mac users. Though we have heard about all these technologies on iOS devices and have embraced them whole-heartedly, OS X Mountain Lion uses the same features to make Mac users more comfortable and the operating system more productive and easier to use. With New Editions like the Gatekeeper service, Apple is also trying to bring an App Store Downloads Only! Service to Mac Users. Though such a switch is currently difficult and users have been given an opportunity to release this barricade but it does seem a good move to heavily protect the Mac from any kind of malware.

Though Mountain Lion doesn't look like a radically new operating system at first glance, but spend a week or two with it and you'll realize how your life with a computer, just got easier and much more productive.

HOWTO TUTORIALS

DOWNLOADING WINDOWS 8 CONSUMER PREVIEW

1. Paste This URL in your browser:
<http://bit.ly/win8dwnld>
2. Click on the Download Windows 8 Consumer Preview Button
3. The Installer shall be downloaded within a few minutes and then you can begin your Windows 8 Consumer Preview Download using the Software Downloaded.

USING THE IPAD SANS HOME BUTTON

1. Unlock your iPad and goto the 'Settings' Application.
2. In "General" Settings scroll down to find "Multi-Touch Gestures" check whether they are turned on. Turn them On if they aren't.

UNINSTALLING INTERNET EXPLORER FROM WINDOWS

1. Click on the Start Menu Icon, and then Click on Control Panel.
2. Click "Uninstall a Program"
3. Click on "Turn Windows Features on or off" from the Side Bar.
4. In the Dialog Box that Appears, Uncheck Internet Explorer.
5. Windows will give you a warning message. Click Yes to Accept what its saying.

6. Press OK. And Wait for Internet Explorer to Uninstall.

PINNING IMAGES FROM WEBSITES TO PINTEREST

1. Paste this URL in your Web Browser:
pinterest.com/about/goodies
2. Drag the Pin It button to your Bookmark and then Save it there.
3. Now while visiting any website, if you wish to pin an image, you may click the "Pin it" Button from the Bookmarks Bar and pin any image from the webpage.

THE RUPEE SYMBOL ON NUMBERS FOR IPAD

1. in Your Spreadsheet in the Numbers app for iPad, select the cell , column or row where you wish to place the Rupee Symbol.
2. Now on the Top Right Corner choose the Brush icon, and select the format tab.
3. Tap Currency in the Format Tab and tap on the blue icon pointing towards right.
4. In the next menu change the currency from "\$ US Dollar" to "Indian Rupee".
5. Now any value you enter in the selected row, column or cell, will have the Rupee Symbol along with it.

MVDIT TECH QUIZ

Vidit Bhargava

Q1. How do we better know Nokia Codename 'Sea Ray' Today?

Q2. This is an electronic payment service as well as the name of a device designed for this purpose. It allows users to accept payment cards through their mobile phones, either by swiping the card on the device or by manually entering the details on the phone. Introduced in early 2010 application is currently available for the iPhone, iPod Touch, iPad and Android-based mobile phones, and is expected to be available for laptops soon.

Q3. X: I have over 4,000 emails, pictures, addresses, SNS

[Friend's Name]: What? How'd you manage that one?

X: People just submitted it.

X: I don't know why.

X: They "trust me"

X: Dumb *%%@%.

Who is X?

Q4. Dave Morin is the co-founder of which popular iOS App which was in a security trouble recently?

Q5. Yang Rongshan is the CEO of a Chinese IT company, which got into a patent dispute over an Apple Trademark recently. Which IT company am I talking about?

Q6. Arkady Volozh and Arkady Borkovsky in 1990 cofounded Arkadia, a software company. How do we better know Arkadia today?

Q7. "I got more thrill out of them than I have out of any piece of high tech in years" - This is Steve Jobs talking about something. What is he talking about?

Q8. Which game based on the GoldSrc Engine was developed by Minh "Gooseman" Le and Jess Cliffe? An excerpt from the gameplay section of the Wikipedia page of the game reads : "Spectators are generally able to watch the rest of the round from multiple selectable views, although some servers disable some of these views to prevent dead players from relaying information about living players to their teammates through alternative media (most notably voice in the case of Internet cafes and Voice over IP programs such as TeamSpeak or Ventrilo). This form of cheating is known as "ghosting"."

Q9. He is the CEO of a Famous Indian IT Firm.
Which IT Firm's CEO is he?

Answers to previous edition:

1. Temple Run
2. Tim Cook, The Horse was Microsoft
3. Mind Tree
4. Stephen Hawkings
5. Megaupload
6. Apple A5
7. Steve Jobs
8. Lumia
9. Ethernet
10. Pacman Strategy
11. Steve Appleton
12. Jeff Weiner
